TRINITY VECTOR OF THE STABILIZATION OF UKRAINIAN ECONOMY UNDER THE TERMS OF UNCONTROLLED GLOBAL CHALLENGES

Summary

The article analyzes the global nature of global economic downturn, which leads to increased inequalities (disparities, imbalances) while limiting the ability of countries to achieve inclusive growth. Ukraine is no exception. Rising external debt, falling commodity markets, protracted military conflict, low innovation orientation of production, reduced exports, unstable, unbalanced political situation and lack of a unified strategy for alternative solutions and responses to threats - create an unfavorable investment environment in the domestic market. , widening the socio-economic gap between Ukraine and neighboring EU countries. The essence of economic development is not only in quantitative growth, increasing production of goods and services, but also in the qualitative development of productive forces, progressive changes in key macroeconomic proportions based on high technology, diversification of production and exports, improving living conditions, reducing social contrasts etc. The result is a country's economy that provides expanded reproduction on a national basis. The aim of the article is to specify the main disparities in the development of the national economy and identify vectors aimed at forming a quality policy of integration into the world economic space based on the paradigm of inclusive development in global pandemics or other unforeseen challenges.

The situation can be stabilized by implementing a quality policy in three main vectors: the introduction of stable macroeconomic (external) cooperation; ensuring sustainable microeconomic (internal) development; formation and development of active human capital. Note that none of these vectors can exist or develop in isolation from others and should be considered only in synergistic interaction with others.

The introduction of the paradigm of inclusive development, which is already common for most European countries, will not only accelerate integration into the world economic space, but will also create conditions for active domestic socio-economic development.

Key words: stable macroeconomic interaction, imbalances, imbalances, macroeconomic stability, sustainable development, inclusive growth, human capital, global challenges, pandemic.

Number of sources: 12; *number of tables:* 2.

Keywords: stable macroeconomic interaction, imbalances, imbalances, macroeconomic stability, sustainable development, inclusive growth, human capital, global challenges, pandemic.
