RELEVANCE OF DESIGNING A HOTEL ESTABLISHMENT WITH A REHABILITATION CENTER FOR THE RECOVERY OF MILITARY SERVANTS

Summary

In connection with the continuation of military operations in the country, the increase in the number of enlisted men for military service and the complicated consequences that arise during return of the defenders to peaceful life, the rehabilitation of servicemen is urgent.

The purpose of the study is to substantiate and develop practical recommendations for the provision of rehabilitation services for recovery of the military personnel in hotel enterprises. The research methodology was based on general scientific methods: analysis, synthesis, classification and review-analytical method, as well as the study of scientific literature on the research topic.

The definition of the concept of rehabilitation is formulated and both traditional and modern methods of rehabilitation are considered. A study of the existing rehabilitation centers for conscripts operating on the territory of Ukraine was conducted. Taking into account that the armed aggression of the Russian Federation continues, we see the need to open new enterprises and introduce rehabilitation services against the background of health resorts and resort hotels. The Western part of the country is a promising location for such institutions, due to its favorable climate, clean air and incredible landscapes. The basic requirements and standards for the establishment of a hotel enterprise with a military rehabilitation center are outlined, for proper recovery conditions and a positive emotional impact on the defenders of our country. The design or reconstruction of hotel enterprises with centers for rehabilitation of the military personnel will have a positive impact not only directly on the defenders of Ukraine, but will also affect the economy of the state, its social and humanitarian spheres as a whole.

The authors define perspective of the further research in a scientific search for the most "efficiently working" recovery methods for military personnel and to determine the services that will be offered by the rehabilitation center at the hotel enterprise.

Keywords: rehabilitation, military personnel, restoration, hotel enterprise, service, rehabilitation center.
