## FINANCIAL POLICY OF UKRAINE IN MODERN CONDITIONS

### *Summary*

The article is devoted to revealing the essence of financial policy, researching the current state of the state's financial policy and analyzing trends in its development. Financial policy is a complex and multi-component phenomenon aimed at ensuring the activities of bodies at all levels of government. In today's conditions, it is important to research the actual instruments of financial policy formation and ways of its improvement, which will effectively influence the development of the financial mechanism. The search for ways to improve financial policy at the current stage of economic development requires constant analysis and study in order to adjust the financial mechanism in response to external and internal factors. Since the full-scale invasion of the aggressor country on the territory of our state, there has been a need to develop a new mechanism of financial policy, which involves the search for additional sources of filling the state budget, revision of previously adopted normative legal acts and attraction of international financial assistance.

The authors of the article considered the state and prospects for the development of the state's financial policy under the influence of external and internal factors. The challenges faced by the economy and ways to overcome them are analyzed. The legislative framework that will improve the mechanism of financial policy has been studied.

*Keywords:* financial policy, financial system, financial mechanism, budget, budgetary policy, tax policy.
